A passionate, dedicated, self-motivated developer eager to continuously learn and develop applications on the web platform to sincerely help people by providing products and services with interactive capabilities, through critical problem solving and constant perseverance

TECHNICAL SKILLS

- HTML/CSS, Git, JavaScript (ES5/ES6)
- Responsive Design, Flexbox, Bootstrap, Materialize
- React, Redux, Webpack
- RESTful API, Express, Node.JS, MongoDB
- Object-oriented and Functional Programming

SOFT SKILLS

- Accuracy and attention to detail
- Highly organized and able to multitask
- Excellent problem solving and communication skills
- Responsible team player with a strong work ethic

EXPERIENCE

Junior Software Engineer

Lexia Learning Systems

September – December, 2016 | June – August, 2017

Concord, MA

- Built multiple JSON schemas by identifying patterns in large JSON object files for overall application data consistently and unit testing purposes while also resolving minor bug fixes in the application build process as needed.
- Drafted and compiled functional scripts in JavaScript to automate JSON file modifications, which essentially simplified and fastened the substantial application content revision process.
- Familiar with agile software development methodology and the Scrum framework concepts and practices.

Infrastructure Coordinator Support Intern

Information Systems and Technology (IS&T), MIT

July – August, 2015

Cambridge, MA

- Performed quality assurance work including documenting jack locations and surveying Uninterruptible Power Supply (UPS) installment needs in more than 100 telecommunications rooms in case of power outage
- Built around 50 Building Management Switches (BMS) as a contribution to the MIT Sloan Building Renovation Project
- Labeled and scanned Media Access Control (MAC) addresses on wireless access points

PROJECTS

Focus — Full Stack Development w/ React, Redux, Express, Node.js and MongoDB

January – February, 2018

- A simple, elegant, in progress task manager application, to specifically help students and computer savvy workers organize and get their daily work done efficiently and on time.
- Built with mobile-first design implementation in mind, fully responsive and supports major devices

RecruiterBot — Front End Development w/ HTML/CSS, Bootstrap, jQuery & AngularJS

DevMountain Student Developers

July – August, 2016

Dallas, TX

- A customized slack bot integration and an interactive application that connects recruiters and candidates to fill technical positions through the Slack app.
- Built majority of front-end user interfaces for the application portion individually using AngularJS for modeling views and Bootstrap for responsive layouts, design, and styling.

EDUCATION

University of Massachusetts Boston

Bachelor of Science, Computer Science

Boston, MA

September, 2016 – Present

DevMountain

Web Development Immersive Program

Dallas, TX

May – August, 2016
